Data, and methods to work with the data

- etc etc etc

More objects!

Data, and methods to work with the data

- etc etc etc
- Demo creating our own `set`

Encapsulation

Picking up from last class…

We want a cohesive place to put all the data

Example: `Set`

How might the `set` object be implemented?

Create a `set` object that has an `__init__()` and `add(more)` methods

sets

How would we do `difference` or `intersection`?

Summary

Objects are 1 cohesive place to place data
